

# Maths Week Scotland in Primary 7/6

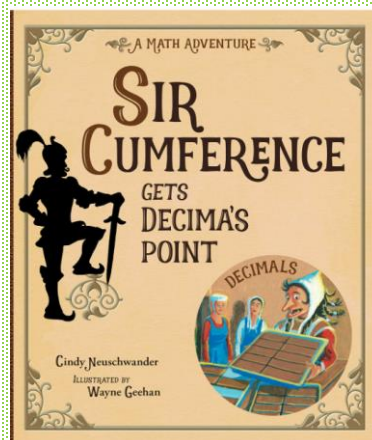

We tried curve stitching! We used rulers and protractors to construct shapes and then used straight lines to create curved patterns. We were creative with our use of colour and combining different designs and learned about angles and measurement.

We chose a career to research and identified how they use maths and other skills.

We read a story about maths – looking at decimals to link to our learning in place value!

We used our collaboration and communication skills whilst playing games to practice our times tables and test our numeracy knowledge!
